

A large industrial printing machine, the Kodak Prosper S10 Imprinting System, is shown in operation. The machine is dark grey and black, with two large vertical units on the right side, each featuring a red 'Kodak' logo. A yellow diagonal line runs across the upper left portion of the image. In the foreground, a printed page with various diagrams and text is being processed by the machine. The background is a plain, light-colored wall.

from new opportunities

## Extend your capabilities—and your opportunities for profit

### Maximize the profit potential of your offset equipment

With the Kodak Prosper S10 Imprinting System, which is built on Kodak Stream Inkjet Technology, you can enter and thrive in the hybrid digital printing market. This solution enables you to combine the best of your web offset and web finishing equipment with high-quality, high-speed variable capabilities. The result is an ability to produce a range of new, personalized applications that add value for your clients by enabling a more profitable business.

### Get inline

The S10 Imprinting System offers offset class reliability, productivity, cost of ownership, and image quality so you can easily integrate into existing web press production processes.

Historically, adding personalized information to offset printed documents was a time-, labor-, and cost-intensive process, with the offset forms moving back and forth between an offset press and third-party partners for imprinting. With the S10 Imprinting System, personalization is added inline on your web offset press or inline web finishing equipment, so you are better able to meet your customers' requirements for cost control and turnaround. By keeping personalized printing on your printshop floor, you keep profits in-house, while increasing customer satisfaction.

• The **Kodak Prosper S10 Imprinting System** integrates into your existing web offset press using the **Kodak Versamark DC3800 Printhead Carriage**.

• 40' (12.19 meter) umbilical enables outstanding mounting flexibility, allowing you to place the S10 Imprinting System where it works best for your press and your workflow.

## Print to profit

Using **Kodak Stream Inkjet Technology**, you create a world of new opportunities for your business. By adding the S10 Imprinting System to your existing web offset press, you can produce everything from direct mail solicitations and postcards, to promotional offers, coupons, membership kits, and business forms—all inline while protecting your existing web investment. The net result is you have more applications to offer, keeping jobs—and profits—in-house.

## Driven with power and flexibility

The S10 Imprinting System is driven by a **Kodak Versamark CS410 System Controller** that offers an easy-to-use graphical user interface (GUI) for efficiency and provides a digital front end for properly interpreting and rasterizing data.

## Move at the speed of your business

Running up to 1,000 feet per minute (305 meters per minute) with a host of automated maintenance features, easy-to-use operator replaceable printheads, and exceptional durability means you can turn jobs around as quickly and reliably as you always have—only now, they'll be more valuable for your customers and more profitable for you.

## Quality counts

With a resolution of 600 x 600 dpi, along with exceptional optical density and permanence, the S10 Imprinting System produces image quality that is difficult to distinguish from offset, with the added value of variability.

## Inks and substrates

Pigment-based inks, unlike dye-based inks, offer higher levels of permanence, including scratch, fade, and water resistance and rich, dark blacks on standard coated offset stocks.\*

## Grow to more coverage

At over 4.16" (10.6 cm), the S10 Imprinting System provides exceptional scalability. Factor in the ability to mechanically stitch four printheads together and you can see that wide-format, single-pass, two-sided printing at unprecedented speed is a reality.

Easy-to-use operator replaceable jetting modules give you the control to maximize your uptime.

\*Optimal print performance at top speed on glossy stocks requires sufficient drying. Recommended drying setup: two Adphos NIR120 inkjet drying systems or other equivalent.

# Trust in Kodak

## Kodak and you — transforming the industry together

As an innovator in imaging, color, and printing technology, Kodak offers you the broadest array of integrated graphic communications solutions in the industry. With premier printing solutions and the expert resources of **Kodak Service & Support**, Kodak helps you deliver relevant, unique solutions for your clients through market-leading technologies, products, and services. The combination of our deep portfolio and vast experience is unparalleled, enabling you to be faster, more efficient, more productive, and better able to expand into—and dominate—new, profitable markets.
